Devangi Dosi

DECLARATION

I, Devangi Dosi, hereby declare that the project report entitled “My Favourite Recipe” is prepared by me as part of my academic project. The website has been developed using HTML , CSS and Basic Javascript . The information and content used in this project have been arranged and presented for educational purposes.

I have completed this project to the best of my knowledge and have acknowledged the references used in preparing the project.

Place: Ahmedabad Devangi Dosi

1. PROJECT OVERVIEW & INTRODUCTION

1.1 Project Overview:

My Favourite Recipe is a simple and user-friendly recipe website developed to display a collection of different favourite food recipes in an organized way.

The website contains different types of food items and categories. Users can explore recipes through the home page and visit individual recipe pages to view the recipe image, ingredients and cooking instructions.

The website also contains different sections such as Indian, Chinese, Snacks, Desserts and Beverages. Along with recipe information, the website includes Sign In and Contact Us pages.

The main purpose of this project is to create a simple and attractive website where users can easily explore different recipes and find the information required to prepare them.

1.2 Introduction

Food and recipes are an important part of everyday life. People often search for recipes to learn about ingredients and cooking methods. A website can provide recipe information in a simple and organized form.

The My Favourite Recipe website provides recipe collections with images, ingredients and instructions. HTML is used to create the structure of the website, while CSS and Basic Javascript is used to design and style the pages.

The project also helps demonstrate basic concepts of web development such as web page creation, navigation, images, buttons, links, lists and CSS styling.

2. PROBLEM STATEMENT & SCOPE

2.1 Problem Statement:

Finding recipe information from different sources can sometimes be difficult because the information may not be organized in one place.

Some common problems are:

- Recipe information may be spread across different websites.
- Ingredients and instructions may not be displayed together.
- Users may find it difficult to navigate between different recipes.
- A simple recipe collection can be useful for beginners who want easy access to recipe information.
- Different types of recipes can be organized into categories for easier browsing.

2.2 Project Scope:

The scope of the My Favourite Recipe website includes:

- Displaying a collection of favourite recipes.
- Providing different food categories.
- Displaying recipe images.
- Providing ingredients for each recipe.
- Providing cooking instructions.
- Creating separate pages for different recipes.
- Providing Indian and Chinese food categories.
- Including Snacks, Desserts and Beverages.
- Providing a Sign In page.
- Providing a Contact Us page.
- Creating a simple and attractive user interface using HTML and CSS.
- Providing easy navigation between different pages.

3. SYSTEM REQUIREMENTS

3.1 Hardware Requirements:

The website does not require high-end hardware. The basic requirements are:

- Processor: Intel Core i3 or equivalent
- RAM: 4 GB or higher
- Storage: At least 500 MB free space
- Keyboard and Mouse: Required
- Display: Standard monitor or laptop display

3.2 Software Requirements :

The software requirements for developing and viewing the website are:

- Operating System: Windows 10/11 or higher
- Code Editor: Visual Studio Code
- Languages: HTML , CSS and Basic Javascript
- Web Browser: Google Chrome / Microsoft Edge / Firefox
- Image Resources: Images used for displaying recipes

4. TECHNOLOGY STACK

The My Favourite Recipe website is developed using basic front-end web technologies.

4.1 HTML :

HTML stands for HyperText Markup Language. It is used to create the basic structure of web pages.

HTML is used in this project for:

- Creating headings and paragraphs
- Adding images
- Creating buttons and links
- Creating lists
- Creating forms
- Creating different sections of web pages
- Connecting different recipe pages

4.2 CSS :

CSS stands for Cascading Style Sheets. It is used to design and style the HTML pages.

CSS is used in this project for:

- Changing colours
- Setting fonts
- Aligning content
- Adding backgrounds
- Designing buttons
- Creating borders and boxes
- Setting image sizes
- Adding spacing between elements
- Improving the overall appearance of the website

4.3 Visual Studio Code :

Visual Studio Code is used as the code editor for creating and editing the HTML and CSS files of the project.

4.4 Web Browser :

A web browser is used to open and test the website. The website can be viewed using browsers such as Google Chrome, Microsoft Edge or Firefox.

4.5 JavaScript :

JavaScript is used to add interactive functionality to the website. In this project, JavaScript is used with the onclick event and the show() function to display or reveal content when the user clicks a button.

5. FEATURES & FUNCTIONALITY

The My Favourite Recipe website provides the following features:

5.1 Home Page :

The home page is the main page of the website. It introduces the website and provides navigation to different recipe categories and pages.

5.2 Recipe Collection:

The website displays a collection of different favourite recipes. Each recipe can contain an image, ingredients and cooking instructions.

5.3 Indian Recipes:

The Indian category contains different Indian dishes such as Dosa, Veg Biryani, Paneer Tikka, Bhaji and other Indian food items.

5.4 Chinese Recipes:

The Chinese category provides different Chinese food items and allows users to explore recipes from this category.

5.5 Snacks:

The Snacks section contains different snack items that can be viewed by the user.

5.6 Desserts:

The Desserts section contains sweet food items such as Chocolate Cake and other desserts.

5.7 Beverages

The Beverages section contains different drink items that are included in the recipe collection.

5.8 Individual Recipe Pages:

Different recipes have their own pages. These pages provide:

- Recipe name
- Recipe image
- Ingredients
- Instructions
- Recipe description

This makes the recipe information easier to understand.

5.9 Sign In Page:

The website contains a Sign In page where users can enter their details through the provided form.

5.10 Contact Us Page:

The Contact Us page provides a way for users to enter their information and message. It is included to provide a basic communication section for the website.

5.11 Navigation:

The website contains links and buttons that help users move from one page to another and explore different recipe categories.

6. CONCLUSION

The My Favourite Recipe project successfully demonstrates the basic concepts of front-end web development using HTML and CSS.

The website provides an organized collection of recipes along with images, ingredients and cooking instructions. Different categories such as Indian, Chinese, Snacks, Desserts and Beverages make it easier for users to explore different types of food.

The project also includes additional pages such as Sign In and Contact Us. Through this project, basic concepts of HTML page structure, CSS styling, navigation, images, lists, buttons and forms were implemented.

Overall, this project helped in understanding how a simple multi-page website can be designed and developed using HTML , CSS and Basic Javascript.

7. ANNEXURE

7.1 HTML Code Sample:

Example of a heading and image used in the recipe website:

```
<h1 class="h1">Chocolate cake</h1>

<button class="back" onclick="history.back()">Back</button>
<div class="recipe">
    <div class="chocolate">
        <img src="img/d.jfif" alt="chocolate cake">
    </div>

    <div class="details">
        <ul class="ingredients">ingredients</ul>

        <li>1¼ cups all-purpose flour (maida)</li>
        <li>¾ cup cocoa powder</li>
        <li>1 cup sugar</li>
        <li>1 tsp baking powder</li>
        <li>½ tsp baking soda</li>
        <li>½ tsp salt</li>
        <li>2 eggs</li>
        <li>½ cup milk</li>
        <li>½ cup vegetable oil</li>
        <li>1 tsp vanilla essence</li>
        </ul>
```

7.2 CSS Code Sample:

Example of CSS used for styling the recipe page:

```
.h1{
    display: block;
    width: 100%;
    text-align: center;
    margin: 20px 0;
    color: white;
    background-color: rgb(245, 177, 245);
}
.recipe {
    display: flex;
    flex-wrap: wrap;
    gap: 70px;
    box-sizing: border-box;
    width: 100%;
    margin: 0;
    padding: 20px;
}
```

7.3 Project Pages:

The main pages included in the project are:

- Home Page
- Indian Recipes
- Chinese Recipes
- Snacks
- Desserts
- Beverages
- Individual Recipe Pages
- Sign In Page
- Contact Us Page
